### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

- 6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

1. Claims 1-5 are pending.

#### *Specification*

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Multimedia Memory Access Device With Integrated Floppy Drive.

#### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 1-2 and 4-5 are rejected under 35 U.S.C. 102(a) as being anticipated by Mitsumi (Mitsumi FA401A or FA402A media drive; archived 08/06/2003).

As to claim 1:

5. Mitsumi teaches multimedia access device comprising a main board, a first card slot, a second card slot, one or more HUB connector and a disk read mechanism, wherein: the main board is provided with one or more USB (Universal Serial Bus) pocket disk memory; the first card slot is mounted to and electrically connected to the main board; the second card slot is mounted to and electrically connected to the main board; the one or more HUB connector is mounted to and electrically connected to the main board; and the disk read mechanism is

assembled to and electrically connected to the top of the main board (See product description and pictures).

As to claim 2:

6. Mitsumi teaches the first card slot, the second card slot and the HUB connectors are respectively mounted onto the main board; the main board being then in whole embedded and assembled in a receiving housing; the disk read mechanism being subsequently embedded in the receiving housing and electrically connected to the main board; and finally a top cover being covered thereon to form the multimedia access device (See product description and pictures).

As to claim 4:

7. Mitsumi teaches wherein the second card slot is suitable to access the data of Compact Flash card and Micro Drive card (support Compact Flash and Micro Drive; See product description and pictures).

As to claim 5:

8. Mitsumi teaches the disk read mechanism is a 3.5-inch floppy drive (floppy drive reader; See product description and pictures).

***Claim Rejections - 35 USC § 103***

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over (Mitsumi FA401A or FA402A media drive; archived 08/06/2003), as applied to claim1 above, and further in view of Adaptec (Adaptec Media Reader 7500; archived 12/12/2001).

As to claim 3:

11. Mitsumi teaches the first card slot is suitable to access the data of Smart Media card, Secure Digital card, Multi-Media card, and Memory Stick card (See product description and pictures). However Mitsumi does not have support for XD-picture cards. It was known to have XD-media card support in memory cards reader so that the flexibility of reading a multitude of media devices is increased. Adaptec teaches this idea by including XD-picture media support in its Media Reader 7500, which can read all of the media of Mitsumi's media reader (See Adaptec Media Reader 7500 specification and pictures). It would have been obvious to one of ordinary skills at the time of the invention to use Adaptec's teaching to include XD-picture media support, in Mitsumi's invention to allow more flexibility in the media types supported.
